

For China, some researchers have also assessed the PV power generation potential. He et al. [43] utilized 10-year hourly solar irradiation data from 2001 to 2010 from 200 representative locations to develop provincial solar availability profiles. It was found that the potential solar output of China could reach approximately 14 PWh and 130 PWh in the lower ...

Additionally, photovoltaics' improved efficiency and production cost competitiveness have positioned them as mature alternatives compared to conventional power generation facilities [5].

PV power generation includes PV power generation and grid-connected PV power generation, and the scope of this paper focuses on solar energy harvesting technologies for PV self-powered applications, which belongs to the former scope. There are many studies on PV self-powered technologies, but there has been no review of this field.

In recent years, solar photovoltaic power generation technology has gradually matured. By the end of 2019, the cumulative installed capacity of photovoltaic power generation in China has reached 204.3 million kilowatts, a year-on-year increase of 17.3%.
