

Can I buy insurance for lithium battery packs

What policies should be in place for lithium-ion batteries?

Clear policies and rules should be in place specific to provision, storage, use and charging of equipment containing lithium-ion batteries, these being formally communicated at induction, through regular toolbox talks and on signing-in where visitors and contractors are concerned.

Are lithium batteries a fire risk?

You'll find them in things used every day, like phones, laptops, and e-scooters - and they could pose a huge fire risk if not stored and used correctly. Here at Allianz, our home insurance claims more than doubled from 2022 to 2023 for fires caused by lithium batteries.

Are lithium-ion batteries suitable for a fire risk assessment?

For a fire risk assessment to be considered suitable and sufficient it must consider all significant risks of fire. Where lithium-ion batteries are concerned this should cover handling, storage, use and charging, as appropriate.

Are lithium-ion batteries safe?

It's important to be aware of the other safety hazards either directly linked to or potentially associated with the use, storage and /or handling of lithium-ion batteries: Electrical hazards /safety - high voltage cabling and components capable of delivering a potentially fatal electric shock.

How do you manage a lithium-ion battery hazard?

Specific risk control measures should be determined through site, task and activity risk assessments, with the handling of and work on batteries clearly changing the risk profile. Considerations include: Segregation of charging and any areas where work on or handling of lithium-ion batteries is undertaken.

How do you keep a lithium battery safe?

Here are a few tips to keep your home and family safe: Avoid charging devices overnight or unattended. Overcharging can damage your battery and increase the risk of a fire. The last place you want to be when a fire breaks out is asleep. Store lithium batteries in a cool, dry place away from heat sources.
