According to Bobba et al., 2018, the lifespan of a new battery is generally longer than that of a used battery. When the new and reused batteries are applied to consider different performance characteristics, the functional unit of LCA can be represented as the annual average energy usage in the transportation and building sectors.

The dependence of battery life on the sizing of micro-grid components is the same already discussed for the lead-gel technology. Thus, in case of HESS, it is possible to estimate the life battery by using the function depicted for the Li-ion technology in Fig. 11, where x is expressed by Eq. (6).
