

# How to open the top cover of lead-acid battery

How do you fill a sealed lead acid battery?

Most of your small sealed lead acid batteries can be filled back up by removing the top cover and the rubber boots underneath. Then filling the cells with distilled water. I will show you how. You can fill many types of sealed lead acid batteries in this manner and repair many of them to like new condition.

Can a sealed lead acid battery be repaired?

You can fill many types of sealed lead acid batteries in this manner and repair many of them to like new condition. This of course depends in their physical condition. Alarm batteries, UPS batteries, scooters batteries, fisher price kids car batteries and most other small sealed 6 or 12 volt lead acid batteries can be restored in this way.

How do sealed lead acid batteries work?

By design sealed lead acid batteries are,by their very nature,sealed. This means that if they have been damaged by overcharging and have dried out then it is problematic to restore them. Ironically it is possible to do this damage in the first place because they aren't completely sealed. There is a rubber cap on top of each cell.

How do you remove lead acid from a battery?

Battery acid will eat most materials with time. Have plenty of water on hand in case of emergency so you can flush it away. Have some baking soda nearby to neutralize any acid that may spill out. Get some distilled water to refill your batteries. Use ONLY distilled water. Never put tap water,rain water or anything else into lead acid batteries.

How do you refill a lead acid battery?

Get some distilled water to refill your batteries. Use ONLY distilled water. Never put tap water,rain water or anything else into lead acid batteries. Have a sharp pointed object such as a screw on hand. I use a 3 inch screw to pry off the lids. Get a small flat tip screwdriver for prying.

Does a lead acid battery revert to lead and sulphuric acid?

In the highly charged state,a lead acid battery will revert to lead and sulphuric acid,only becoming lead sulphate when discharged. It's quite difficult to photograph the inside of the cells but the photo below is good enough to see that there is no liquid above the plates.
