

Is there a free replacement for new energy batteries

Can a nonflammable battery replace a lithium ion battery?

Now Alsym Energy has developed a nonflammable, nontoxic alternative to lithium-ion batteries to help renewables like wind and solar bridge the gap in a broader range of sectors. The company's electrodes use relatively stable, abundant materials, and its electrolyte is primarily water with some nontoxic add-ons.

Could new battery technology be cheaper and greener?

Emerging alternatives could be cheaper and greener. In Australia's Yarra Valley, new battery technology is helping power the country's residential buildings and commercial ventures - without using lithium. These batteries rely on sodium - an element found in table salt - and they could be another step in the quest for a truly sustainable battery.

What are alternative batteries?

In addition, alternative batteries are being developed that reduce reliance on rare earth metals. These include solid-state batteries that replace the Li-Ion battery's liquid electrolyte with a solid electrolyte, resulting in a more efficient and safer battery.

Could a new lithium-ion battery make electric cars more sustainable?

MIT researchers have now designed a battery material that could offer a more sustainable way to power electric cars. The new lithium-ion battery includes a cathode based on organic materials, instead of cobalt or nickel (another metal often used in lithium-ion batteries).

Can lithium-ion batteries be recycled?

Yes, lithium-ion batteries contain valuable metals like cobalt and nickel that can be extracted during recycling. However, they need to be properly handled so very little effort goes into recycling them. Lithium-ion batteries power everything from smartphones to electric vehicles today, but safer and better alternatives are on the horizon.

Can a new battery technology save money?

"It is already competitive with incumbent technologies, and it can save a lot of the cost and pain and environmental issues related to mining the metals that currently go into batteries." Dinca is the senior author of the study, which appears today in the journal ACS Central Science.
