Till yesterday, everything worked perfectly on my bike and I had tubeless tires installed by the bikeshop. Today, Wahoo Element does not connect with the SRAM power meter. This has never happened before. The Element does not have a problem connecting with the SRAM AXS gears... On the SRAM app everything works fine, so I'm guessing the problem is ...

Output power turned off means the UPS output power has turned off and you have no power at the outlets on

The power meter can be turned on but the battery is not turned on

the back of your UPS. I see battery related events there so depending on how high your load is, how old your battery is, and how long the outage is, it could also mean you need a new battery soon - which may be a separate issue from why the output ...

The actual plan is NOT as sensationally headlined by the MAIL, no surprise there. In the article it states a 3rd Gen Smart meter will be required and selective high load appliances could be turned off, not the whole house. Presumably the plan is to have separate circuits from the 3rd Gen meter so only those will be switched off.

Regular battery checks can identify issues early and prolong battery life. Moreover, parking your car in a garage can protect it from extreme weather, which can accelerate battery discharge. Understanding what can drain your car battery when not turned on is crucial for maintaining vehicle reliability.
