What are the main interests of a solid state battery?

Current key interests include solid-state batteries, solid electrolytes, and solid electrolyte interfaces. He is particularly interested in kinetics at interfaces. Abstract Solid-state batteries are considered as a reasonable further development of lithium-ion batteries with liquid electrolytes.

Are solid-state batteries better than liquid electrolyte batteries?

Solid-state batteries (SSBs), which have lower flammability, higher electrochemical stability, higher potential cathode, and higher energy density compared to liquid electrolyte batteries (Fig. 1), are an emerging trend for next-generation traction batteries as they offer high performance and safety at low cost [2, 3, 4].

#### What is a solid state battery?

Application of solid-state batteries In consumer devices, solid-state batteries provide higher battery life, charge cycles, and power delivery, suggesting higher processing capacity. They are tiny, allowing more room for other components and keeping devices cool, resulting in more efficient CPUs. They can charge quickly, reaching 80% in 15 min.

Are solid-state batteries the future of energy storage?

Therefore, developing next-generation energy-storage technologies with innate safety and high energy density is essential for large-scale energy-storage systems. In this context, solid-state batteries (SSBs) have been revived recently due to their unparalleled safety and high energy density (Fig. 1).

What is the difference between a lithium-ion battery and a solid-state battery?

Fig. 5. The difference between a lithium-ion battery and a solid-state battery . Conventional batteries or traditional lithium-ion batteries use liquid or polymer gel electrolytes, while Solid-state batteries (SSBs) are a type of rechargeable batteries that use a solid electrolyte to conduct ion movements between the electrodes.

#### What is a solid-state battery (SSB)?

The solid-state battery (SSB) is a novel technology that has a higher specific energy density than conventional batteries. This is possible by replacing the conventional liquid electrolyte inside batteries with a solid electrolyte to bring more benefits and safety.
