

The solar input is 36 volts 100-400 watts, 42 volt open circuit voltage. If I remember Ryobi 40v batteries max out at 300 watts, but do i need to limit current or will the BMS prevent this. I was also hoping when the 120W solar panel on order from Temu shows up I may be able to have it in parallel with the battery any help/advice is appreciated.
