When sunlight hits the solar cells in a solar panel, the photons in the sunlight knock electrons loose from the atoms in the solar cells, creating a flow of electrons or electricity. This direct current (DC) electricity is then converted into alternating current (AC) electricity using an inverter, which is suitable for use in homes, businesses, and other electrical systems.

The cost to charge your electric car with grid energy, will vary depending on your energy tariff and car battery size. For example, if your tariff is 30p per kWh and your battery is 100 kWh, the cost to fully charge your car would be approximately £30. You can estimate these costs by multiplying the tariff by the battery size, and dividing this by 100 (i.e. $30 \times 100 = 300 / \dots$
