

How a battery design is developed?

The design solutions are assessed from an assembly,disassembly and modularity point of view to establish what solutions are of interest. Based on the evaluation,an "ideal" battery is developed with focus on the hardware,hence the housing,attachment of modules and wires,thermal system and battery management box.

What are the three parts of battery pack manufacturing process?

Battery Module: Manufacturing,Assembly and Test Process Flow. In the Previous article,we saw the first three parts of the Battery Pack Manufacturing process: Electrode Manufacturing,Cell Assembly,Cell Finishing. Article Link In this article,we will look at the Module Production part.

How do you design a battery pack?

When designing a battery pack,it is important to weigh different parameters against each other to achieve a suitable design. It is therefore significant for these tradeoffs to have a valid foundation to stand on. One tradeoff that needs to be accounted for is comparing safety of the battery against its weight.

How does a battery tray assembly work?

The battery tray assembly consists of several production steps. Depending on the battery design and manufacturing processes,manual tightening with bolt positioning and process control,or flow drill fastening with K-Flow technology can bring the needed process quality,productivity and flexibility.

What's new in battery design?

Batteries in general is also revised to get a better overview of what functions and parts are included in a battery in order to map its functions in an Enhanced Function-Means model. This model creates an image of how the functions and design solutions are connected to each other.

How are battery housings assembled?

All battery housings are assembled using screws which is beneficial for the disassembly since it is possible to remove the lid without damaging it. However,a large amount of screws is needed,making it a time-consuming activity and an increased number of parts results in longer lead times as well as higher material usage.
