

Will European Union counter Chinese subsidies?

The European Union's (EU) move to counter Chinese subsidies followed the Biden administration's imposition of tariffs in mid-May against a range of high-tech products from China, including 100% tariffs on EVs and 25% on EV batteries. This should come as no surprise to anyone.

Is China distorting competition with subsidies for electric cars?

The massive subsidisation of Chinese companies has led to fierce criticism in the West, however. The European Commission accuses the Chinese government of distorting competition with subsidies for electric cars and has launched an official anti-subsidy investigation into electric cars in China in October 2023.

How can Chinese battery companies benefit from tariffs?

By transferring technology and establishing local production, Chinese battery companies can secure access to critical resources in a region less prone to geopolitical tensions than the US. Tariffs, by contrast, have done little to achieve their intended goals.

Why are battery electric vehicles so popular in China?

China's rise to the world's largest market and production base for battery electric vehicles has been boosted by the Chinese government's longstanding extensive support of the industry, which includes both demand- and supply-side subsidies.

Are Chinese electric vehicles being subsidized by the European Commission?

Last month, the European Commission confirmed tariffs of up to 35 per cent on Chinese electric vehicles, on top of an existing 10 per cent levy. It has also introduced stricter requirements for companies applying for hydrogen subsidies, decreeing that only 25 per cent of parts in the electrolyzers used to make hydrogen can be sourced from China.

How many companies in China receive government subsidies in 2022?

The database also shows that in 2022 almost all listed companies in China (more than 99% in the database) have received direct government subsidies (Bruegel, 2024). Sources: Bruegel (2024), National Bureau of Statistics of China (2023) and Deutsche Bundesbank (2024); authors' own currency conversion, calculation of ratios and illustration.

The Chinese car market is heavily regulated due to the population density across core Chinese territory, there's heavy concern around air pollution and traffic (the air in many Chinese cities is still incredibly bad). ... Tesla was also a beneficiary from Chinese subsidies as they have a gigantic factory in Shanghai. In fact, in 2022, Tesla ...

From generous government subsidies to support for lithium batteries, here are the keys to understanding how

China managed to build a world-leading industry of electric vehicles.

There are also subsidies available to battery producers. However, draft guidelines released in 2016 stipulated that battery producers would have to have at least 8 GWh of production capacity to qualify for ...

On October 4, 2024, the European Commission proposal to impose definitive countervailing duties of up to 35.3% on imports of battery electric vehicles

The problem has been until now that 95% of those are lithium iron phosphate (LFP) batteries are produced in China thanks to a series of patents held there. Those patents are expiring soon and Tesla plans to adopt ...

Whether BYD gets subsidies or not doesn't really matter in that point. Yes BYD does get sponsored by Winnie Pooh. Yet those subsidies are rather ridiculous, compared to the excessive margins of European manufacturers. We can start ...

Brussels is planning to force Chinese companies to transfer intellectual property to European businesses in return for EU subsidies as part of a tougher trade regime for clean technologies.

The increased scrutiny of Chinese technology imports has already incentivised companies such as China's CATL, the world's biggest electric vehicle battery manufacturer, to set up so-called ...

Battery manufacturers are following a pattern exhibited in other industries such as steel, aluminium and solar panels, industry executives warned, where Chinese ...

A blue book published by a Chinese think tank on Saturday highlights the impacts of EU subsidies for lithium batteries, photovoltaic (PV) products, and electric vehicles (EVs) revealing the EU's ...

Global Impact: Electrifying the World, One Battery at a Time. China's dominance in battery production has profound implications for global supply chains. For instance, the U.S. and European automakers are increasingly dependent on Chinese batteries for their EVs, highlighting a critical aspect of energy security and economic policy.

Furthermore, several Chinese battery-material and cell producers are investing in Morocco, which has a free-trade agreement with the United States, to meet IRA ...

Definitive countervailing duties on imports of battery electric vehicles (BEVs) from China have been adopted by the EU Commission under Implementing Regulation (EU) 2024/2754, ...

China uses subsidies extensively to take a leading role in the global markets of green-tech products such as battery electric vehicles and wind turbines.

Potential Chinese battery investments on the continent were also likely to be complicated by the ongoing trade dispute between Brussels and Beijing over EU tariffs on ...

The European Union's (EU) move to counter Chinese subsidies followed the Biden administration's imposition of tariffs in mid-May against a range of high-tech products from China, including 100% tariffs on EVs and ...
