What are the different types of battery testing & certification?

We have a highly efficient testing and certification process for a wide range of battery types: Primary Battery - standards IEC/EN60086-1, IEC/EN60086-2 are intended to standardise primary batteries with respect to dimensions, nomenclature, terminal configurations, markings, test methods, performance, safety and environmental aspects.

What is IEC battery standard certification?

IEC 60086is an international standard that encourages manufacturers of batteries to ensure that their batteries are interchangeable according to standard form,fit and function. This is intended to help end users,as well as manufacturers of devices that use your batteries.

Who develops battery standards?

The most used standards are proposed and developed by testing facilities, battery producers, device integrators, car manufacturers, and governmental bodies; the standards are constantly reviewed to make sure they maintain relevance with technology developments and applications.

What types of batteries are regulated?

The regulations cover all typesof batteries,regardless of their shape,volume,weight,material composition or use; and all appliances into which a battery is or may be incorporated. There are some exemptions including batteries used in:
