

Can a solar battery storage system save you money?

According to E.ON, in central England, a 9.6 kWh solar battery storage system (with 12 x 315W panels) might allow you to utilise up to 30% more of the energy generated by your solar panels and save up to £560 on your annual energy bills. This helps you make further cuts to your energy bill.

Why is solar energy storage important?

Storing this surplus energy is essential to getting the most out of any solar panel system, and can result in cost-savings, more efficient energy grids, and decreased fossil fuel emissions. Solar energy storage has a few main benefits: Balancing electric loads. If electricity isn't stored, it has to be used at the moment it's generated.

Why is energy storage important?

Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy. It reduces wasted energy and is more cost effective than exporting excess electricity. For example, you can store electricity generated during the day by solar panels in an electric battery.

Can energy storage save you money?

If you have a renewable electricity generator like solar panels or a wind turbine, installing energy storage will save you money on your electricity bills. You need to weigh the potential savings against the cost of installation and how long the battery will last.
