SOLAR PRO. Blade battery cooling system principle

Why do we need blade batteries?

Blade batteries cannot achieve higher energy density in battery materials, but they have made breakthroughs in battery system integration. This solves the shortcomings of short battery life of lithium iron phosphate batteries. This is the background for the birth of blade batteries. Part 3. BYD blade battery specifications Part 4.

What are the advantages and disadvantages of blade batteries?

Another advantage of blade batteries is that they have good heat dissipation performance. We all know that batteries are particularly sensitive to temperature, which is also the main reason that limits battery fast charging time. Therefore, heat dissipation is a very important indicator for battery cells.

What is blade battery technology?

Blade battery technology was developed by BYD, a leading Chinese automotive and green energy company. It represents a new approach to lithium-ion batteries, designed specifically to enhance safety and performance while addressing the limitations of conventional battery designs .

How does a blade battery work?

The high-voltage wiring harness and sensors of the blade battery are in the Y direction of the battery cell. Therefore, the upper box can be in direct contact with the battery core. This allows the blade battery to save 10~20mm in height compared to batteries of the same specification.

Why do lithium ion batteries have a blade shaped cell design?

The design minimizes the risk of thermal runaway, which can lead to fires or explosions in lithium-ion batteries . By using a blade-shaped cell design, the battery reduces the potential for internal short circuits and thermal propagation. This design helps improve the battery's overall safety performance.

Are BYD blade batteries better than other manufacturers?

By comparing examples and using research data, this paper studies BYD's blade batteries and batteries of other manufacturers. Through research, people can find that BYD's blade battery does have obvious advantages over other manufacturers in technology and safety. However, the temperature control of the battery can be further improved.

With the rapid increase in power battery capacity and charge/discharge rates, liquid cooling has become the preferred method for meeting heat dissipation requirements [20].

The thermoelectric battery cooling system developed by Kim et al. [50] included a thermoelectric cooling module (TEM) (see Fig. 3 (A)), a pump, a radiator, and a cooling fan as illustrated in Fig. 3 (B). A thermal design analysis was performed in this study on a 1 kW thermoelectric battery cooler in order to optimise the

However, the increase in operating temperature requires high level of cooling system design, specifically blade internal cooling system design. ... 1.1 The working principle of gas turbines. The simplest and most common gas turbine is an in-line axial flow turbine, as shown in Figure 1. A gas turbine operates by guiding incoming air into the ...

The blade battery offers a longer lifespan, enhanced safety, and improved space utilization and battery pack integration. However, its heat generation distribution differs from cylindrical or square cells. To address this, we designed a shunt-controlled direct cooling plate tailored to the heat generation characteristics of blade batteries. Using numerical simulation, we evaluated the ...

Air cooling, liquid cooling, phase change cooling, and heat pipe cooling are all current battery pack cooling techniques for high temperature operation conditions [7,8,9]. Compared to other cooling techniques, the liquid cooling system has become one of the most commercial thermal management techniques for power batteries considering its effective ...

The market share of blade batteries is rising rapidly due to their high energy density, efficient space utilization, and low cost. Nevertheless, effective cooling solutions for blade batteries are ...

Abstract. The microchannel cooling plate is a vital component in an efficient battery thermal management system (BTMS) that has been widely used to design battery modules for electric vehicles. In this study, regarding the leaf vein structure of plantain, a novel bionic cooling plate similar to the plantain leaf vein channels was proposed. A three ...

The most prominent new approach in the field of batteries is the "Blade Battery" cells manufactured by BYD. A distinctive feature of the "Blade Battery" is the large length of such cells--one can occupy the entire width of ...
