

How are blade batteries arranged?

The blade batteries are arranged with honeycomb aluminum plates, with two high-strength aluminum plates attached to the top and bottom, allowing for higher space utilization and the ability to fit more battery cells in the same space compared to traditional modules.

Why do we need blade batteries?

Blade batteries cannot achieve higher energy density in battery materials, but they have made breakthroughs in battery system integration. This solves the shortcomings of short battery life of lithium iron phosphate batteries. This is the background for the birth of blade batteries. Part 3. BYD blade battery specifications Part 4.

What are the advantages and disadvantages of blade batteries?

Another advantage of blade batteries is that they have good heat dissipation performance. We all know that batteries are particularly sensitive to temperature, which is also the main reason that limits battery fast charging time. Therefore, heat dissipation is a very important indicator for battery cells.

What are the design parameters of BYD blade battery?

Based on the disassembly information provided, the approximate design parameters for the blade battery are as follows: The BYD blade battery is an innovative structural design of lithium iron phosphate battery, where the battery cells are designed to be thin and long like blades, hence the name "blade battery".

What is blade battery?

Blade Battery can change the size of the battery pack in the X and Y directions according to the vehicle space, and develop batteries of different specifications. This platform-based battery effectively reduces development costs and time. Its patent shows that there are at least 8 types of blade battery solutions.

How does a blade battery work?

The high-voltage wiring harness and sensors of the blade battery are in the Y direction of the battery cell. Therefore, the upper box can be in direct contact with the battery core. This allows the blade battery to save 10~20mm in height compared to batteries of the same specification.

Blade battery reassembly module problem

This format is SVOLT's alternative to the BYD Blade battery. In a 96s1p configuration (96 cells connected in series) the 400-volt battery pack will have a capacity around 81 kWh. With module-less assembly and a GCTP (gravimetric cell-to-pack) ratio of 90 % the 81 kWh battery pack would weigh around 375 kg. BYD Blade battery cell specs
