

Why does China invest in EV batteries?

This dynamic is driven partly by the capital-intensive nature of battery plants--often worth at least \$1 billion--and Chinese companies' competitiveness in this field. CATL and BYD alone accounted for 53 percent of the global EV battery market in 2023. Notably, China's battery investments have diversified.

Why are Chinese battery manufacturers expanding overseas?

Chinese battery investments--driven by greenfield projects--are increasingly diversifying, including inputs like anodes and cathodes. Chinese battery manufacturers are bringing more of the supply chain with them in their overseas expansion, likely in response to growing market demand and re-shoring pressures.

Who are China's EV battery investors?

CATL and BYD alone accounted for 53 percent of the global EV battery market in 2023. Notably, China's battery investments have diversified. While Chinese battery producers like CATL and Svolt continued to account for the bulk of Chinese EV OFDI with new gigafactories, a new type of Chinese EV investor has emerged.

Will China invest in a 100 GWh battery plant?

In August 2022, China's battery giant CATL announced that it will invest 7.34 billion euros (\$7.8 billion) to build a 100 GWh battery plant in Debrecen, Hungary, which is also the company's second battery plant in Europe. However, analysts said that some risks remain for Chinese companies investing abroad.

Are China-made batteries the future of EV technology?

China-made batteries are of high quality with sufficient production capacity, so it is believed that Chinese battery companies will play a major role in this wave of global new energy revolution, analysts said. China's battery materials and EV technology applications continue to make breakthroughs.

How much is the battery industry worth in China?

A whopping \$22.4 billion (81 percent of total OFDI) was comprised of battery manufacturing-related investment. This dynamic is driven partly by the capital-intensive nature of battery plants--often worth at least \$1 billion--and Chinese companies' competitiveness in this field.

China's clean tech investment share dips US, Europe battery factory spend triples Solar capacity meets net zero 2030 needs China accounted for three quarters of global investments in clean technology

5 ???&#0183; Chinese-African joint venture is latest company to find way past Western trade barriers while leveraging region's abundant battery materials.

China accounted for three-quarters of global investments in clean technology manufacturing in 2023, down

from 85% in 2022 as investment in the US and Europe grew ...

It had Rmb289bn (\$40bn) of cash as of March 31, but China's strict system of capital controls means it must get government approval for overseas direct investment above ...
