

Do you need a start-stop battery?

Unlike normal car batteries, start-stop ones switch off your engine every time your car comes to a stop, conserving fuel and cutting down on the emissions your car releases. The trade-off for this clever technology is that fitting a start-stop battery can be a challenging job and one that we'd always recommend leaving to the experts.

Should I get my car battery professionally fitted?

The number one reason for getting your car battery professionally fitted is that in most start-stop cars, a new battery will need to be paired with the car's onboard computer before it will work properly. This requires the use of an iMAT tool, which is a special piece of equipment that you're not likely to have to hand.

Do I need to change my car battery?

If you have ever turned the ignition or tried to start your vehicle and been greeted by silence, then you may need to change the battery. Starting problems are often caused by a flat or dead car battery. Thankfully, replacing a faulty battery is a simple task. And you can do it yourself or use the RAC battery fitting service.

How do I install a new car battery?

Install the new battery: Place your new battery in the tray. You can then secure it with clamps or brackets. Connect the positive (+) terminal first. Then connect the negative (-) terminal. Test the battery: Start your car to make sure the battery is working.

Can a car battery be used as a replacement?

There is a simple test you can carry out to determine the condition of your battery and if you think you need to start thinking about fitting a car battery as a replacement. First, try starting your car at night with the headlights switched on. If the headlights are overly dim, put the vehicle in neutral or park if automatic, and rev the engine.

Should I buy a new car battery and replace my old one?

Buying a new car battery and replacing your old one isn't always straightforward. You need to find the right battery for your vehicle. And when fitting it, most modern car manufacturers need the battery to be coded to their system. It takes the hassle away when you choose a professional service.

Sadly, nor do I. I'd bet 75% of the installers out there really don't. For me, it IS the last connection I make. I install everything and hook everything up first. The last 2 connections I make are the main power wire to the battery and the plug to the HU/factory plug.

No, you typically do not need to charge a replacement battery before use. Most modern batteries, especially lithium-ion types, come pre-charged and are ready to use right out of the packaging. Replacement batteries are

designed to retain a charge during shipping and storage. However, the initial charge level may vary.
