

The rapid growth of the electric vehicle (EV) market has fueled intense research and development efforts to improve battery technologies, which are key to enhancing EV performance and driving range.

In response to the problems of the traditional new energy vehicle power battery traceability system such as centralized easy tampering, data cannot be shared and lack of effective management, this paper proposes a blockchain-based new energy vehicle power battery supply chain traceability system. Analyzed the business processes in the power battery supply chain ...

The issue of how to reduce their resource consumption and environmental pollution has become a primary concern for sustainable human development [2,3].

The study presents the analysis of electric vehicle lithium-ion battery energy density, energy conversion efficiency technology, optimized use of renewable energy, and development trends. The organization of the paper is as follows: Section 2 introduces the types of electric vehicles and the impact of charging by connecting to the grid on renewable energy.

These Interim Administrative Measures are enacted to strengthen the management of the recycling and utilization of the power battery for new energy vehicles, promote the comprehensive utilization of resources, protect the environment and human health, and promote the sustainable and healthy development of the new energy automobile industry.

The & #8220;Three-electricity& #8221; system (battery system, electric drive system and electric control system) is the most important component of a new energy vehicle. Compared with the battery system, which determines the driving distance of ...

At present, new energy vehicles mainly use lithium cobalt acid batteries, Li-iron phosphate batteries, nickel-metal hydride batteries, and ternary batteries as power reserves.

For example, in the Implementation Measures for Encouraging the Purchase and Use of New Energy Vehicles, the Shanghai government mentioned that "new energy vehicle manufacturers should fulfill relevant commitments and responsibilities, abide by relevant national and local regulations, and connect relevant data, such as the codes of vehicles and power ...

The application of lead-corrosive batteries is developing, so the evacuation of the parts is developing. The dry batteries were created in 1859 and are the world's most established battery-powered batteries. While this sort of battery is generally utilized in conventional auto, it has additionally been used in new energy vehicles.

Compared with China's new energy vehicle sales in 2018, the market share of new energy vehicles is still not large enough. The reasons why users do not accept new energy vehicles are low cruising ...

With the rapid promotion of the number of China's new energy vehicles in promotion and application, it is of great significance to ensure the recycling of the waste power batteries.

China is working to boost the manufacture, market share, sales, and use of NEVs to replace fuel vehicles in transportation sector to get carbon reduction target by 2060. In this research, using Simapro life cycle assessment software and Eco-invent database, the market share, carbon footprint, and life cycle analysis of fuel vehicles, NEVs, and batteries were ...

Researchers are working to adapt the standard lithium-ion battery to make safer, smaller, and lighter versions. An MIT-led study describes an approach that can help ...

Considering the supply chain composed of a power battery supplier and a new energy vehicle manufacturer, under the carbon cap-and-trade policy, this paper studies the different cooperation modes between the manufacturer and the supplier as well as their strategies for green technology and power battery production. Three game models are constructed and ...

Replacement of new energy vehicles (NEVs) i.e., electric vehicles (EVs) and renewable energy sources by traditional vehicles i.e., fuel vehicles (FVs) and fossil fuels in transportation systems can help for sustainable development of transportation and decrease global carbon emissions due to zero tailpipe emissions (Baars et al., 2020).

In the same year, another project called "Ten cities and a thousand energy-saving and new energy vehicles demonstration and application project" ("Ten Cities, Thousand Vehicles Project" in short) was jointly established by the MoST, MoF, NDRC, Ministry of Industry and Information Technology (MoIT), to carry out the first experimentations with NEV adoption in ...
