

What is a hybrid electrolytic capacitor?

This hybrid design enables high capacitance while maintaining the low equivalent series resistance (ESR) and low leakage current of conductive polymer capacitors, while providing the high voltage rating and high ripple current capability of aluminum electrolytic capacitors.

What is conductive polymer hybrid aluminum electrolytic capacitor?

Conductive polymer hybrid aluminum electrolytic capacitors, with the electrolyte fused with conductive polymer and electrolyte liquid, are suitable for automotive equipment, communication base stations, etc. which need compact and highly reliable components.

Why is hybrid polymer a good choice for electrolytic capacitors?

However, a high number of parallel-connected parts also increase the complexity of the system stability. In the field of Aluminum Electrolytic Capacitors, the Hybrid Polymer technology offers higher ripple current densities by a factor of, e.g., 5x compared to standard Liquid Electrolyte technology.

Are hybrid capacitors better than conventional electrolytic capacitors?

As described earlier, hybrid capacitors have improved the weak points of conventional aluminum electrolytic capacitors such as low-temperature characteristics, ESR characteristics, and high ripple through the adoption of a conductive polymer while keeping their advantages (safety, low LC).

Why are hybrid capacitors so popular?

The reason why comes down to freedom of choice. The universe of capacitors has expanded greatly over the past few years, in large part because of capacitor designs that take advantage of advances in conductive polymers. Hybrid capacitor technology combines the performance benefits of electrolytic and polymer capacitors.

What is PZ-cap conductive polymer aluminum solid electrolytic capacitor (hybrid type)?

Conductive Polymer Aluminum Solid Electrolytic Capacitor (Hybrid Type) "PZ-CAP" is a next-generation capacitor that supports high reliability uses a conductive polymer and hybrid an independently developed functional liquid as a cathode material instead of the electrolytic solution of non solid aluminum electrolytic capacitor.
