

What are energy storage applications?

More specifically, energy storage applications as a concept aim to provide technologies that convert energy into storable forms. It also balances energy consumption with production by storing excess energy for long and/or short periods

How to make energy storage bankable?

Stacking of payments is the most common way to make the business model for energy storage bankable whilst optimizing services to the grid. In its simplest version it contains: Let the best technology provide the service(s) the grid needs. Thinking of technology first could do the grid a disservice. I o n e p r o j e c t s ? I t d e p e n d s

What is energy storage & how does it work?

Energy storage systems (ESS) provide reliability and resiliency for businesses and the grid alike while helping to reduce GHG emissions as an alternative to diesel backup generation. Storing energy can help manage peak demand charges, reduce peak loads on the grid and provide electricity during outages.

Who is eligible for the energy storage incentive (ESI)?

To be eligible for our energy storage incentive (ESI), customers must meet the following criteria: Be on a general service or irrigation rate under the Electric Tariff. Plan to install a new battery. Batteries that have already been purchased or installed are not eligible. Must complete applicable net metering or generator interconnections process.

How long does it take to install and energize an ESS?

Must install and energize an ESS that meets all the system requirements of the program within 24 months of completing a distribution generator interconnections facility study or the net metering application process. Agree to a 10-year contract to provide demand flexibility services via the ESS to BC Hydro.

Why is storing energy important?

Storing energy can help manage peak demand charges, reduce peak loads on the grid and provide electricity during outages. We're offering incentives to our business customers to support the acquisition, installation, and operation of ESS.
