How do electric vehicles work?

The success of electric vehicles depends upon their Energy Storage Systems. The Energy Storage System can be a Fuel Cell, Supercapacitor, or battery. Each system has its advantages and disadvantages. A fuel cell works as an electrochemical cell that generates electricity for driving vehicles.

Which car models use fuel cells?

Major car models using Fuel cells are Toyota Mirai (range up to 502 km), Honda Clarity (up to 589 km), Hyundai Tucson Fuel Cell (up to 426 km). A supercapacitor (sometimes Ultra-Capacitor) is the same as a battery that can store and release electricity. In a supercapacitor, no chemical reaction happens rather than charge is stored statically.

Why are battery-powered vehicles growing so fast?

Battery-powered Vehicles (BEVs or EVs) are growing much faster than conventional Internal Combustion (IC) engines. This is because of a shortage of petroleum products and environmental concerns. EV sales have grown by 62 % globally in the first half of 2022 as compared to the first half of 2021.
