

How is n-n type heterojunction formed?

The n-n type heterojunction was formed by hydrothermal deposition of Sb₂(S,Se)₃ and thermal evaporation of Sb₂Se₃. We found that the n-n junction is able to enhance the carrier separation by the formation of an electric field, reduce the interfacial recombination and generate optimized band alignment.

Can n-n semiconductor heterojunction separate the exciton in a solar cell?

Carrier separation in a solar cell usually relies on the p-n junction. Here we show that an n-n type inorganic semiconductor heterojunction is also able to separate the exciton for efficient solar cell applications. The n-n type heterojunction was formed by hydrothermal deposition of Sb₂(S,Se)₃ and thermal evaporation of Sb₂Se₃.

Can n-type nanocrystalline silicon improve current and transport properties in heterojunction solar cells?

N-type nanocrystalline silicon (nc-Si:H (n)) layers are good candidates to improve current and transport properties in heterojunction solar cells. In this work, we perform thickness series alongside PH₃ doping series to unravel the desirable characteristics of nc-Si:H (n) along its growth direction.

What is the maximum voltage of a single crystalline p-n heterojunction?

The dependence of short circuit current (I_{sc}) and open circuit voltage (V_{oc}) on gate voltage (V_g) and light intensity (I). The maximum value of V_{oc} is 1.04 V at $V_g = -40$ V, which is the highest value achieved in organic single-crystalline p-n heterojunctions so far, to the best of our knowledge.

Can crystalline p-n heterojunctions be used to study exciton physics?

Hence, achieving highly ordered crystalline p-n heterojunctions with atomically well-defined interface at monolayer thickness limit, is a powerful strategy for studying exciton physics without the limitations imposed by exciton diffusion lengths, as well as an efficient way to reveal the fundamental mechanisms in organic optoelectronic devices.

Does n-n heterojunction increase the internal electrical field?

The V_{bi} of the SbSSe control device and SbSSe-SbSe device are 0.527 V and 0.676 V, respectively. This result is in good agreement with the V_{OC} changes, indicating that the n-n heterojunction between Sb₂(S,Se)₃ and Sb₂Se₃ increases the internal electrical field.

A heterojunction silicon SC consists of a textured n-type silicon wafer (in this work, single-crystal wafers grown by the Czochralski process were used), which is

A novel method to fabricate low-cost n-Sb₂S₃/p-Ge heterojunction solar cells by chemical deposition is reported. It has been observed that, in the case of n-Sb₂S₃ films chemically deposited with silicotungstic acid on (1 11) oriented single-crystalline p-Ge and annealed, the heterojunction solar cell properties are

considerably improved.

N-type nanocrystalline silicon (nc-Si:H (n)) layers are good candidates to improve current and transport properties in heterojunction solar cells. In this work, we perform ...

As predicted in Fig. 1 (c), c-Si heterojunction solar cells with passivating contacts will be the next generation high-efficiency PV production ($\geq 25\%$) after PERC. This article reviews the recent development of high-efficiency Si heterojunction solar cells based on different passivating contact technologies, from materials to devices.

In the wave of renewable energy replacing fossil energy, perovskite solar cells (PSCs) have emerged. In recent work by X. Sun et al., perovskite devices built by precisely controlling the thermal annealing process ...

Silicon heterojunction solar cells have historically suffered from high series resistivities. Yet, until recently, little had been done to understand the main factors behind this behavior. In this work, we present a systematic analysis in order to quantify and characterize the contribution from each layer of a-Si:H(i)/aSi:H(n)/ITO/Ag electron contacts. We attempt to address how the stack ...

n-type silicon wafer (in this work, single-crystal wafers grown by the Czochralski process were used), which is covered by two thin layers of intrinsic and alloyed

We identify chlorine impurities as the source of the n-type doping and subsequently demonstrate MgCl_2 as an effective deliberate n-type dopant for single-crystal Sb_2Se_3 .

At present, the global photovoltaic (PV) market is dominated by crystalline silicon (c-Si) solar cell technology, and silicon heterojunction solar (SHJ) cells have been developed rapidly after the concept was proposed, ...

Photovoltaic properties and electronic structures of n-type amorphous $\text{In}_{1-x}\text{Ga}_x\text{ZnO}$ /p-type Si heterojunction solar cells ($x = 1, 2$, and 3) were investigated focusing on the effects of Ga ...

X-ray photoelectron spectroscopy (XPS), hot-probe, Hall effect and surface photo-voltage spectroscopy showed films and crystals synthesized from Sb_2Se_3 granulate material to be n ...

the source of the n-type doping and subsequently demonstrate MgCl_2 as an effective deliberate n-type dopant for single-crystal Sb_2Se_3 . We thereby establish that the $\text{TCO}/\text{TiO}_2/\text{n-Sb}_2\text{Se}_3/\text{Au}$ device structure produced is, in fact, an isotype n-n heterojunction device. EXPERIMENTAL SECTION Thin Film and Cell Fabrication. Sb_2Se_3 cells ...

We report independently confirmed 22.15% and record 22.58% power conversion efficiencies, for thin (130 μm - 140 μm) p- and n-type mono-like Si solar cells, respectively.

Herein, a pn homojunction SnS solar cell is fabricated for the first time by the deposition of p-type SnS polycrystalline thin films on the recently reported large n-type SnS single crystals. The p-type thin films consist of columnar grains that grow along the $\langle 100 \rangle$ direction, which is the same orientation as the n-type single crystal.

Such crystal structure tends to yield ribbon-like or layered morphologies that outcome with thoroughly anisotropic charge transport. ... utilized as n-type dopants in Sb₂Se₃ thin films (Mavlonov et al., 2020; Stoliaroff et al., 2020). ... conversion efficiency of single heterojunction cells cannot go beyond the SQ limit due to (i) thermal ...

Request PDF | CdTe single-crystal heterojunction photovoltaic cells | Most recent gains in CdTe photovoltaic (PV) device efficiency have been in short-circuit current density (J_{sc}) and fill factor ...
