While these batteries offer remarkable convenience, improper use and storage can lead to serious hazards for homeowners and first responders. Chief Teresa Robinson from the Ferndale Fire Department shared the challenges these batteries present.

Are lithium ion batteries dangerous?

Lithium-ion batteries are the main type of rechargeable battery used and stored in commercial premises and residential buildings. The risks associated with these batteries can lead to a fire and/or an explosion with little or no warning.

Are lithium-ion batteries a fire hazard?

The Science of Fire and Explosion Hazards from Lithium-Ion Batteries sheds light on lithium-ion battery construction, the basics of thermal runaway, and potential fire and explosion hazards.

What are the risks associated with battery power?

Battery power has been around for a long time. The risks inherent in the production, storage, use and disposal of batteries are not new. However, the way we use batteries is rapidly evolving, which brings these risks into sharp focus.

What happens if a battery is not damaged?

Most batteries that are not damaged are not having these issues," Sehlmeier said. Overheating, overcharging and using damaged batteries can lead to fires or even explosions. Unfortunately, Lehman did not recognize the potential dangers. "There was nothing wrong with the battery as far as I knew.

What happens if you don't dispose of batteries correctly?

The incorrect disposal of batteries - for example, in household waste - can lead to batteries being punctured or crushed. This is known to have caused fires in bin lorries and at waste recycling centres, endangering the safety of workers and others. Legal regime

2.1 Removal of the battery pack. ... In situ disposal: Regardless of the economic aspect of reducing transportation costs or the safety aspect of reducing hidden dangers, "disposal on site" is a more appropriate option than transporting used LIBs to less stringent countries.

such products containing hidden dangerous goods may be erroneously offered as undeclared dangerous goods for transportation by air. Some examples are as follows.
