How do I choose a home battery storage system?

Let's start with the battery - the muscle behind your home battery storage system. The size of the battery you install depends on your energy needs. A detached house with five people will likely use more energy than a small 1-bedroom flat with two people. Make sure you do your research before choosing a home battery that's right for you.

How do home battery storage systems work?

If these are the kind of questions you're asking yourself, this guide, explaining how home battery storage systems work, is for you. All home battery storage systems include two basic components: a battery and an inverter. Let's start with the battery - the muscle behind your home battery storage system.

Can a home storage battery be charged from the grid?

You can charge your home storage battery from the grid during cheaper off-peak hours. Then, during peak periods, you can discharge when energy is more expensive. This can help reduce your reliance on the grid when energy is more expensive and therefore, cut your bills.

Can storage batteries be used to meet energy needs?

If the amount you generate and store in your battery isn't enough, you can still draw from the grid to meet your energy needs. The numbers suggest that too many of us remain unaware of the crucial role storage batteries play in the development of renewables.
