How to connect 18 lithium batteries in series

When should a lithium battery be connected in series?

You should connect lithium batteries in series when your device requires a higher voltage than a single battery can provide. For example, if your device operates at 7.4V, connecting two 3.7V batteries in series would be appropriate. This setup is commonly used in applications like electric scooters, drones, or other high-voltage devices.

How to connect lithium ion batteries in series?

Connecting battery cells in series is a pretty straightforward process, but there are some key elements that should be understood before doing so. To connect lithium-ion batteries in series, all you have to do is connect the positive connection of the first cell to the negative connection of the next one.

How do you wire a 12 volt battery in a series?

For example, these two 12-volt batteries are wired in series and now produce 24 volts, but they still have a total capacity of 35 AH. To connect batteries in a series, use a jumper wireto connect the first battery's negative terminal to the second battery's positive terminal.

How do you charge a lithium ion battery in series?

When charging lithium batteries in series, the charge voltage is divided among the number of cells in series. As long as each cell has about the same resistance, then the voltage will be split equally. An NMC lithium-ion battery cell has a max charge voltage of 4.2 volts.

Why are lithium batteries connected in series?

Lithium batteries are connected in series when the goal is to increase the nominal voltage ratingof one individual lithium battery - by connecting it in series strings with at least one more of the same type and specification - to meet the nominal operating voltage of the system the batteries are being installed to support.

Are lithium-ion batteries wired in series?

In fact, every battery pack we sell consists of a collection of cells that have been wired in series (and often in parallel, too). In this guide, we'll walk you through the steps of safely wiring lithium-ion batteries in series to create a higher voltage battery pack for your projects.
