I'd like to install a new socket in my kitchen on an outside wall. The nearest socket that I could run power from is on an adjacent wall and the path of least resistance (I think) is to drill through the wall and run the cable outside. This would avoid having to channel through the plaster in the kitchen and then try to patch and paint over it.

Connection to the electrical installation. To supply the electrical installation, the DC output from the modules is converted to AC by a power inverter unit which is designed to operate in parallel with the incoming mains electricity supply to the premises, and as such is commonly known as a "grid-tie" inverter.
