In the context of low carbon emissions, new energy vehicles powered by battery technology are rapidly emerging as the dominant driving force, replacing traditional fossil fuel vehicles at an astonishing pace.

In 2020, the weighted average range for a new battery electric car was about 350 kilometres (km), up from 200 km in 2015. The weighted average range of electric cars in the United States ...

Replacement of new energy vehicles (NEVs) i.e., electric vehicles (EVs) and renewable energy sources by traditional vehicles i.e., fuel vehicles (FVs) and fossil fuels in transportation systems can help for sustainable development of transportation and decrease global carbon emissions due to zero tailpipe emissions (Baars et al., 2020).

Those changes make it possible to shrink the overall battery considerably while maintaining its energy-storage capacity, thereby achieving a higher energy density. "Those features -- enhanced safety and greater energy density -- are probably the two most-often-touted advantages of a potential solid-state battery," says Huang.

**Battery Capacity.** Battery capacity or Energy capacity is the ability of a battery to deliver a certain amount of power over a while. It is measured in kilowatt-hours (product of voltage and ampere-hours). It ...

The lateral dynamics is neglected as it does not have a major impact on vehicle's energy consumption. Three main power flows are considered in the proposed model: Energy flow from the battery pack to the wheels to propel the vehicle. Energy flow from the wheels to the battery pack during energy recovery by regenerative braking.

The New Energy Vehicle Industry Development Plan focuses on strategies and targets to promote new energy vehicles (including electric vehicles and hydrogen fuel cell vehicles). One of the main targets is to reach a fuel economy of 12kWh/100km for electric vehicles by 2025, and for new energy vehicles to account for 20% of the new vehicle sales.

The new energy vehicles include electric vehicles, fuel cell vehicles and alternative energy vehicles. The "travel right restriction" and "ownership restriction" policies started in 2008 are not applicable to electric vehicles, which offer new opportunities for the development of EVs in Beijing. 50 electric buses and 25 hybrid buses have come to service in the city since ...
