Why do we put solar panels together?

We put solar panels together to increase the solar-generated power. Connecting more than one solar panel in series, in parallel or in a mixed-mode is an effective and easy way not only to build a cost-effective solar panel system but also helps us add more solar panels in the future to meet our increasing daily needs for electricity.

Should I connect my solar panels in series or parallel?

To use the calculator, simply enter the number of panels you have and the voltage of your system. The calculator will then show you whether it is better to connect your panels in series or parallel. In general, connecting panels in series is best for high-voltage systems, while connecting them in parallel is best for low-voltage systems.

Can I connect different solar panels in a solar array?

Connect only in series panels of the different brands and of the same current. Connect in parallel panels of different brands and of the same voltage. Connecting different solar panels in a solar array is not recommended since either the voltage or the current might get reduced.
