How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and stored in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.

Is energy storage a good idea?

Energy storage can be useful if you generate renewable electricity and want to use more of it, or outside of daylight hours. It may also be worth considering if you have a time-of-use energy tariff that means you could charge a battery cheaply at off-peak times.

What is home energy storage?

Home energy storage involves using a system to store energy for later use. You can store different types of energy, for example heat, but the most common type of home energy storage system uses a battery to store electricity. This article will concentrate on this type.

How can a home storage battery help you save money?

Alternatively, you could install a home storage battery. These store your electricity to use later, making your energy system more independent from the National Grid. Usually battery storage is used alongside solar panels, but it can also be used with an energy tariff that offers cheaper electricity at off-peak times.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.
