

Lead-acid battery installed in the rear seat

What's the difference between a lead acid battery and a AGM battery?

Much lighter and usable for almost all of the batteries power output whereas with lead acid you get about half before it needs charging again. Not cheap though and going up in price I believe. The first battery (Swift supplied) is a AGM type and the other (dealer supplied) is almost certainly a normal lead/acid battery.

Where is the battery in a car?

The normal,vented,lead-acid battery was in the passenger compartment under the back seat. I had a friend who lived in a completely off-grid cabin for a few years.

Are environmental controls in the passenger compartment good for the battery?

As others mentioned,the environmental controls in the passenger compartment are good for the battery. And strap it down if you can no matter what the location. Let me put your mind at ease. New cars have them in the passenger compartment because its climate controlled and helps the batteries last longer.

Why do new cars have AGM batteries in the passenger compartment?

New cars have them in the passenger compartment because its climate controlled and helps the batteries last longer. These are NOT AGM batteries but standard flooded cells.

How do you secure a car battery?

The main concern is to make sure the battery is properly secured to keep it from banging around or becoming a projectile in the event of an accident. For small batteries,7-20Ah or so,I just velcro them directly to the trunk carpet.

What kind of battery does an autocruise use?

AGM batterieswere often fitted to Autocruise models as they could be installed on their side (eg. under a cab seat). The battery in the 2nd photo is a small wet-acid 075-size (not 75Ah) car starter-battery and the current version is advertised here.

They become more resistive as they are filled. A smart charger can completely fill a Lead Acid battery over time, far better than a split charger, as it uses different stages of ...

Many carmakers install the car battery in the truck, under the back seat, or inside the front fender. All lead-acid car batteries create hydrogen gas when charging. If the gas pressure gets too high, the battery will vent the ...
