How to store lithium ion batteries?

This guide covers the best ways to store Li-ion batteries to ensure their safety and functionality. Store lithium-ion batteries in a cool,dry place,ideally between 5°C and 20°C. Maintain a 40-60% charge level for batteries in long-term storage and periodically check their status.

Can lithium-ion batteries be stored in a warehouse?

Improper storage of lithium-ion batteries in a warehouse or other location can lead to dangerous fires, even if there are protection measures built into the battery. The reason for this is the electrochemical construction of lithium-ion batteries, which consists of several components, each of which has certain chemical properties.

Are lithium-ion batteries safe to store?

Lithium-ion battery fires can even reignite after being contained. In this post, we'll talk through the safe storage requirements for lithium-ion batteries that manage the risks to keep people and facilities safe. The UK doesn't have specific regulations or legislation for the general storage of lithium-ion batteries.

How can a lithium-ion battery storage system keep your workplace safe?

Using specialised storage and handling solutions like lithium-ion battery cabinets, fire suppression granules and lithium-ion battery charging stations, you're not just keeping your workplace safe; you're also ensuring these powerful little energy packs are treated with the respect they deserve.

What is the ideal charge level for storing lithium batteries?

The ideal charge level for storing lithium batteries is around 40-50% of their capacity. Storing a lithium-ion battery at full charge puts stress on its components, potentially leading to a faster loss of capacity over time. Conversely, allowing a battery to discharge completely before storage can cause irreversible damage.

What temperature should a lithium ion battery be stored?

Freezing temperatures can cause irreversible damage to the battery's internal structure, while excessive heat can trigger chemical reactions that may result in a fire. Ideally, Li-ion batteries should be stored in a cool, dry place. The recommended lithium-ion battery storage temperature is between 5°C and 20°C.
