

Does lithium cobalt oxide play a role in lithium ion batteries?

Many cathode materials were explored for the development of lithium-ion batteries. Among these developments, lithium cobalt oxide plays a vital role in the effective performance of lithium-ion batteries.

What is lithium cobalt oxide (LiCoO<sub>2</sub>)?

Cobalt is one of the critical raw materials identified by the EU. Lithium cobalt oxide (LiCoO<sub>2</sub>) is a common cathode material in lithium ion (Li-ion) batteries whose cathode is composed of lithium cobalt oxide (LiCoO<sub>2</sub>). They are widely used for powering mobile phones, laptops, video cameras, and other modern day electronic gadgets.

What is the oxidation state of cobalt in lithium ion batteries?

In Li-ion batteries, cobalt is available in the +3 oxidation state. Cobalt leaching has been studied in MFCs using a cathode with LiCoO<sub>2</sub> particles adsorbed onto it. Reduction of Co (III) to Co (II) in LiCoO<sub>2</sub> particles caused by electron flow from the electroactive biofilm-anode led to the release of Co (II) into the catholyte.

How much cobalt is in a lithium ion battery?

The cobalt content in Li-ion batteries is much higher than in ores, varying from 5 to 20% (w/w). In Li-ion batteries, cobalt is available in the +3 oxidation state. Cobalt leaching has been studied in MFCs using a cathode with LiCoO<sub>2</sub> particles adsorbed onto it.

Is lithium cobalt oxide a cathode?

While lithium cobalt oxide (LCO), discovered and applied in rechargeable LIBs first by Goodenough in the 1980s, is the most widely used cathode material in the 3C industry owing to its easy synthesis, attractive volumetric energy density, and high operating potential [1].

Can lithium cobalt oxide be used as a bifunctional electrocatalyst?

Studied largely for its potential as a cathode material in Li-ion batteries, Maiyalagan et al. studied the application of lithium cobalt oxide (LiCoO<sub>2</sub>) as a bifunctional electrocatalyst.

The acronyms for the intercalation materials (Fig. 2 a) are: LCO for "lithium cobalt oxide", LMO for "lithium manganese oxide", NCM for "nickel cobalt manganese oxide", NCA for "nickel cobalt aluminum oxide", LCP for "lithium cobalt phosphate", LFP for "lithium iron phosphate", LFSF for "lithium iron fluorosulfate", and LTS for "lithium titanium sulfide".
