

What are the 2014/35/EU low voltage regulations?

These Regulations implement the 2014/35/EU Low Voltage Directive and require electrical equipment to be safe and conform to certain essential safety requirements. The Department for Business and Trade has responsibility for the policy on these Regulations.

What are the electrical equipment (safety) regulations?

The Electrical Equipment (Safety) Regulations (on legislation.gov.uk) place duties on designers, manufacturers and suppliers of electrical equipment, operating between 50 and 1,000 volts AC, and 75 and 1,500 volts DC, being placed on the UK market.

What are the 2016 electrical equipment regulations?

The 2016 Regulations set out the requirements that must be met before electrical equipment products can be placed on the GB market. The purpose of the legislation is to ensure safe products are placed on the GB market by requiring manufacturers to show how their products meet the principal elements of the safety objectives. 2.

What is the IC code for rotating electrical machines?

EN 60034-6:1993 Rotating electrical machines - Part 6: Methods of cooling (IC Code) 135. EN 60034-7:1993 Rotating electrical machines - Part 7: Classification of types of construction, mounting arrangements and terminal box position (IM Code) 136.

What temperature should a transformer & LV distribution board be inspected?

In general, Transformers and LV distribution boards temperatures above 60°C shall be recorded as requiring further investigation and above 80°C as needing urgent attention. High Voltage Switchgear and cable boxes higher than 20°C above ambient shall be recorded as requiring further investigation and above 40°C as needing urgent attention.

Can a manufacturer mandate an authorised representative in the UK?

A manufacturer can only mandate an authorised representative established in the UK under the Regulations as they apply in GB. No GB-based authorised representatives are recognised under EU law to carry out tasks on the manufacturer's behalf for equipment being placed on the EU market.

The installation, operation and maintenance of low voltage (LV) devices must only be carried out by authorised installers. N-Series Low Voltage Capacitor Units Product Features Capacitor elements made of metallised polypropylene film are self-healing and dry without impregnation liquid. Each capacitor element is individually protected with patented internal fuse protection. Capacitors have low losses, and are constructed to be compact size and light in weight.
