Ceramic capacitors are broadly categorized into two main types based on their construction and electrical properties: Multilayer Ceramic Capacitors (MLCCs) and Ceramic Disc Capacitors. Multilayer Ceramic Capacitors (MLCCs): Now, MLCCs are built by the vertical stacking of the ceramic dielectric and metal electrodes, which is repeated thousands of times ...

The most common design of a ceramic capacitor is the multilayer construction where the capacitor elements are stacked as shown in Figure 2, so-called MLCC (Multi-Layer ...

In the process of modding an NES US toploader (NES-101) I broke one of the small 0.01uF ceramic capacitor on the board. I am trying to source a replacement for it (good to have lying around I guess, they are everywhere on the board) They are much smaller than the ones found on the original frontloader (NES-001), lead spacing is 2.5mm.

Ceramic capacitors tend to be more temperature resilient as it is just a few plates. The rolled-up electrolytic capacitor, however, is more susceptible to certain temperatures and will break down. - Another aspect might be frequency, where ceramic capacitors have a faster frequency response time. Anything that involves radio comms or data ...
