

What do the numbers on a lithium battery mean?

The numbers on a lithium battery provide important information about the battery's dimensions or capacity. For Cylindrical Batteries (e.g., 18650): The numbers refer to the battery's physical size. In "18650": 18 = Diameter of the battery in millimeters (18mm). 65 = Length of the battery in millimeters (65mm). 0 = Cylindrical shape.

How do I choose a battery code?

Battery codes also help in choosing a battery that offers the best performance for a given application. For instance, if you need a battery for a high-drain device, selecting a code that indicates a high-capacity lithium chemistry, such as 18650, would be ideal.

What are battery codes?

Battery codes typically consist of a series of letters and numbers, each providing distinct information about the battery. While there is no single standard for all battery types, certain conventions are commonly followed across different categories:

How are battery codes standardized?

Battery codes are sometimes standardized by organizations such as the International Electrotechnical Commission (IEC) and the American National Standards Institute (ANSI). These bodies have established guidelines for labeling batteries, ensuring that codes are consistent and universally recognized.

What is a battery date code?

Battery date codes are typically stamped on the top or side of the battery. The code consists of a letter and a number. The letter represents the month the battery was manufactured, while the number represents the year. For example, if you see a code that reads "A17," the "A" represents January, and the "17" represents 2017.

What is a AA battery code?

These codes primarily refer to the battery's size: AA: This code identifies a cylindrical battery with a standard diameter of 14.5 mm and a length of 50.5 mm. Typically, these batteries are composed of alkaline or lithium chemistries, offering a nominal voltage of 1.5V.

The codes are not only OE but also battery specific. The VAG specific BEM code is basically a two line code. The first line contains the OE spare part number. This number is different for OES (i.e. 000915105DG) and OEM (i.e. 4F0915105E) ...
