

New energy scrapes the chassis and damages the battery

Can a new electric vehicle withstand a high-speed frontal impact?

BEIJING -- China's major battery maker CATL recently launched a new electric vehicle (EV) chassis that can withstand a high-speed frontal impact at 120 km/h without catching fire, exploding, or causing any spread of damage, injecting new momentum into the innovative development for new energy vehicles (NEVs).

Why are electric vehicles so controversial?

This is also the fundamental reason why there is considerable controversy over resource and environmental issues in the current electric vehicles.

Why are power batteries insensitive to electric power energy?

Overall, the stratospheric ozone issue, acidification issue, fine particulate matter, ecological toxicity, eutrophication of water bodies, human health, mineral resources, and water resources during the life cycle of the power battery are all insensitive to electric power energy, with data fluctuations below 2 %.

Do power batteries have a positive environmental impact?

In summary, the study on the life cycle impact of power batteries under different electricity energy sources has revealed that renewable energy generally exhibits favorable environmental performance. However, it is noted that certain environmental indicators also present corresponding environmental issues.

What are the different types of battery recycling schemes?

Multiple recycling schemes were established during the recycling stage, incorporating China's battery recycling technology. These schemes include hydrometallurgical recovery, pyrometallurgical recovery, and physical recovery as the comparative methods of recycling.

Does hydrometallurgical recycling improve energy structures and battery recovery?

The study also found that hydrometallurgical recycling had superior efficiency and environmental benefits in the recycling stage. Providing a scientific foundation for sustainable policies, this study promotes the enhancement of energy structures and battery recovery in the automotive industry.
