

Why did Cambodia add a 200 MW power station in Phnom Penh?

One of the ways Cambodia's national utility, Electricité du Cambodge (EDC), sought to increase flexibility was by adding a 200-MW power station in Phnom Penh, the nation's capital. In August 2019, MAN Energy Solutions and China National Heavy Machinery Corp. (CHMC) were jointly awarded a contract to build the facility.

How many engines does Phnom Penh have?

The Phnom Penh power plant consists of 11 MAN 18V51/60DF engines (Figure 2). At full load, the station can supply enough electrical power to meet the average energy requirements of about 70,000 Cambodian households. 2. The MAN 18V51/60DF engine's dual-fuel technology offers flexibility.

Does Phnom Penh support Cambodia's decarbonization goals?

The Phnom Penh power station supports Cambodia's decarbonization goals. The 200-MW facility's 11 dual-fuel engines can operate on heavy fuel oil today, with a goal of using much-lower-emission natural gas when the necessary infrastructure is constructed in the future.

How much electricity does Cambodia use?

The International Energy Agency reports Cambodia's total electricity consumption grew exponentially from 0.4 TWh in 2000, to 8.65 TWh in 2018. Much of the growth in the electricity supply was fueled by biomass and oil, but coal generators and hydropower plants were also added to the mix during that time.

Does Cambodia have hydropower?

Much of the growth in the electricity supply was fueled by biomass and oil, but coal generators and hydropower plants were also added to the mix during that time. Cambodia experiences a dry season from October to April, which can adversely impact hydropower production.

Why is man HSE management system important in Phnom Penh?

Furthermore, the HSE management system was monitored on a regular basis, ensuring onsite safety was constantly maintained. The Phnom Penh plant utilizes MAN's multifunction monitoring system (MMS). The MMS helps to increase engine efficiency and safety through multiple features connected to every major component and engine activity.
