Will mg introduce a semi-solid-state battery?

MG is planning to introduce a semi-solid-state battery, meaning it uses solid and liquid gel electrolytes instead of a completely solid electrolyte - all at a price commensurate with existing liquid-only batteries.

Will mg's first EV be powered by a semi-solid-state battery?

According to MG's general manager, Zhou Xing, the brand's first EV to launch in 2025 will be powered by a semi-solid-state battery. Zhou posted on social media, saying, "The first new model to be launched by the MG brand next year may be equipped with a semi-solid battery." He added, "Let me report to you first that the price is not expensive."

Will SAIC-owned MG launch a semi-solid-state battery-powered EV next year?

2025 is shaping up to be a big year for solid-state batteries in EVs and SAIC-owned MG wants to be at the forefront. SAIC-owned MG may launch a semi-solid-state battery-powered EV next year. It's likely related to another SAIC semi-solid-state EV, the IM L6 sedan. This special battery can provide over 623 miles of CLTC range.

What is a semi-solid-state battery?

Semi-solid-state batteries are halfway between regular lithium-ion and solid-state batteries that do away with the former's liquid or gel electrolyte in favor of a solid-state material. Will semi-solid-state batteries become a production car?

Still, before true solid-state batteries reach a production car, we will likely first see semi-solid-state batteries implemented. One automaker that plans to introduce a semi-solid-state is MG, according to CarNewsChina, which quotes local media sources.

How much does a MG battery cost?

However, unlike the IM L6, which gets the semi-solid-state battery as an option in the highest trim (you can also get it with two cheaper NMC packs), the MG derivative will be semi-solid-state-only. The L6 with the mid-tier NMC battery costs the equivalent of around \$41,500, while the top "Lightyear Max" trim with the special battery costs \$45,650.

Solid-state inorganic magnesium batteries are considered as potential high energy storage devices of the future. Here we present a series of magnesium borohydride tetrahydrofuran (THF) composites, $\text{Mg}(\text{BH}_4)_2 \cdot x\text{THF}(\text{MgO})$, $0 \leq x \leq 3$, as solid-state electrolytes for magnesium batteries. Three new mono-clinic compounds were identified, $\text{Mg}(\text{BH}_4)_2 \cdot x\text{THF}(\text{MgO})$, $x = 1, 2, 3$.
