

Put solar panels at home to collect electricity

Can solar panels power your home?

Solar panels can power your home or other electrical appliances. They offer financial savings and energy independence. You can install DIY solar panels to meet your electricity needs at your home, business premises, outbuildings, garden office, shed, etc.

Should you install a DIY solar panel?

DIY solar panel installation is an accessible way to lower bills, reduce carbon footprint, generate renewable electricity and gain self-sufficiency with the reassurance of knowing you'll always have additional energy to rely on when the sun is shining, even when you're not connected to mains electricity.

How do solar panels work?

Solar panels, also known as photovoltaics (PV), harvest energy from the sun and convert it to electricity that can be used in the home. Energy from solar panels can be used to power a variety of things around a property, including immersion tanks to heat water, and charging electric vehicles.

How do solar panels work in the UK?

Installing solar panels lets you use free, renewable, clean electricity to power your appliances. You can sell extra electricity to the grid or store it for later use. There are over 1.3 million installations on homes across the UK - see where the UK solar panel hotspots are. Let's look at how they work and whether they're suitable for your home.

What can you do with solar energy?

Energy from solar panels can be used to power a variety of things around a property, including immersion tanks to heat water, and charging electric vehicles. The energy can also be stored in a battery, ideal to use when PV generation is low, or is exported back to the grid. Why install solar PV? The solar PV market is bigger than ever.

Are DIY solar panels worth it?

DIY solar panel systems are an attractive way to generate low-cost renewable energy using cheap solar panels. This guide will cover everything you need to know about DIY solar panels in the UK to help you decide if it is worth it.
