

Recent policy changes for energy storage projects

Why is the government removing market barriers to energy storage?

In its response to EAC's report, published today, the Government has set out the steps it is taking to remove market barriers so as to support the rollout of energy storage projects at scale, in order to keep the lights on when renewable energy generation is low.

What is the long duration energy storage Investment Support Scheme?

Long Duration Electricity Storage investment support scheme will boost investor confidence and unlock billions in funding for vital projects. The UK is a step closer to energy independence as the government launches a new scheme to help build energy storage infrastructure.

Which energy storage projects are receiving funding today?

The energy storage projects receiving funding today include: Sunamp's EXTEND project, East Lothian, Scotland - will receive £149,893 for a feasibility study to further develop the storage duration of their thermal batteries.

Why does the UK need long-term energy storage?

In May, the predecessor Environmental Audit Committee (EAC) warned that the lack of long-term energy storage in the UK was driving the importation of gas so as to balance the nation's energy needs. Market, policy and regulatory barriers were all holding back the development of long-term energy storage.

Can large-scale renewables be colocated with energy storage?

In a separate policy development, forthcoming tenders for large-scale renewables under the national Contracts for Difference (CfD) scheme will for the first time allow bids to include generation projects colocated with energy storage.

How will Britain benefit from a new era of clean electricity?

Working people will benefit from a new era of clean electricity, as the government today unveils the most ambitious reforms to the country's energy system in a generation, to make Britain energy secure, protect households from energy price spikes, reindustrialise the country with thousands of skilled jobs, and tackle the climate crisis.

Long-duration energy storage technologies store excess power for long periods to even out the supply. In March 2024, the House of Lords Science and Technology ...

The UK is a step closer to energy independence as the government launches a new scheme to help build energy storage infrastructure. This could see the first significant long duration energy ...

Recent policy changes for energy storage projects

Planning law in the UK has been changed to allow energy storage projects over 50MW to come on line without going through the national planning process. This could pave the way for a major expansion of battery storage facilities across ...

These projects will benefit from a share of over £6.7 million to develop new energy storage technologies that can utilise stored energy as heat, electricity or as a low-carbon energy carrier like ...

future of energy storage. Some of these technologies have a longer and more solid track record for performance which will impact the overall financeability of an energy storage project (see Stability of asset for a battery storage project). Recent growth in the size of viable battery technologies and

Organizations such as the India Energy Storage Alliance (IESA) have called for future amendments to include a clear policy framework regarding energy storage. Although recent amendments to the National Electricity Policy ...

The UK Energy Department BEIS (department for business, energy, and industrial strategy) hopes that the change in the law will triple the UK's energy storage capacity. The UK currently has more than 13.5GW of battery storage projects in the pipeline, with 1.3GW ready to build, 5.7GW with planning permission and a further 6.5GW proposed. The ...

From policy changes for planning and accelerating grid connection to new revenue streams for energy storage providers, 2025 is set to be a big year for batteries in the UK.

California, New York leading the way. The policy environment around energy storage is starting to change at the state level as well. The California Public Utilities Commission last month required the state's three largest utilities to invest in a total of 1,325 megawatts of energy storage by 2020.

Working people will benefit from a new era of clean electricity, as the government today unveils the most ambitious reforms to the country's energy system in a ...

What changes are we implementing? We are accelerating the connection of energy storage projects by removing the requirement for non-critical enabling works to be complete before ...

These actions are additional to the over 200 policies outlined in the most recent Climate Change Plan update [footnote 10], and the climate change action policy package [footnote 11] announced in ...

This investment is part of a combined EUR 12.5 million (£10.4m) in new funding aimed at accelerating the deployment of Behind-the-Meter (BTM) battery energy storage systems (BESS) across the UK ...

2.5.2 Superconducting magnetic energy storage (SMES) 15 Section 3 Energy Storage Today 17 3.1 Energy
