What happens if a lithium ion battery dies?

A lithium-ion battery is considered irreversibly dead when its voltage drops below a certain threshold, typically around 2.5 volts per cell. At this point, the battery may not be able to be recharged using a standard charger, and may need to be replaced.

Can lithium batteries just drop in and replace lead batteries?

Lithium batteries cannot just drop in and replace lead batteries can they? Lithium leisure batteries are designed to be a direct replacement for lead batteries. They achieve this by having an inherently closely aligned terminal voltage to that of other lead acid variants of leisure battery including wet, gel and agm types.

Back to the engine's alternator; let's say we simply tie a standard internally regulated alternator to the lithium battery. The lithium battery has such low resistance that the alternator will charge at full capacity from start to finish and for the most part overheat and fail.
