

Is San Diego considered a solar city?

San Diego is designated as a Solar America City by the U.S. Department of Energy (DOE). The city was keenly aware that the sustainability of the region required an energy infrastructure that was as diversified, reliable, and self-contained as possible, and was granted this designation on June 20, 2007.

How much energy does a solar system use in San Diego?

Solar installations in San Diego that are always tilted at the latitude of San Diego (Average Tilt at Latitude or ATaL) average 6.03 kWh/m²/day, or about 15% greater than the average monthly GHI of 5.26 kWh/m²/day and approximately 5% greater than the average monthly DNI of 5.76 kWh/m²/day. [1]

Does San Diego have barriers to its solar market?

Solar program efforts in San Diego have focused on several questions based on regional experience with solar installations. The California Center for Sustainable Energy (CCSE), the California Public Utilities Commission, and the city have informed the development of the city's initial solar market barriers survey. These perspectives suggest that San Diego may have barriers to its solar market.

What is the San Diego Solar Map?

The San Diego Solar Map was developed to track and map electricity generation data from PV systems and billing information for solar PV and solar water heating installations in the San Diego region. The San Diego Solar Map provides information and PV system characteristics for comparison.
