

These government initiatives are important because Nepalese people lack access to basic clean energy services. For instance, over 22% of the country's population, around 6.5 million people, lack access to grid-connected electricity, and 7 out of 77 districts are not yet connected to the national electricity grid network [8]. More than two-thirds of total households ...

Biomass and solar Photovoltaic (PV) energy resources are considered with emphasis toward real product development with biomass conversion routes, solar cooker's and small-scale PV power generation.

A new study shows size matters in solar energy. The first ever life-cycle analysis comparing big and small solar photovoltaic systems has concluded that small-scale solar systems are in fact better for the environment than even the ...
