

Does a solar system make a smart home work?

A solar system provides clean, renewable, accessible energy to a modern Smart Home. As we mentioned earlier, a Smart Home requires power and connectivity, and even if every one of your new devices is conservation minded and consumption reduced, you still need power to make it all work.

Is solar a good option for a smart home?

When it comes to Smart Home tech, solar has one distinct advantage over the rest of your setup - it's the only component that pays for itself! As you generate solar energy and save on your monthly energy bill, you'll watch as the savings pay off the system over time.

Is solar power a part of a smart home?

Solar power is a critical component of the modern Smart Home, and it offers more value and clean energy impact than any other element of your smart network. To learn more about making solar power a part of your Smart Home project, contact one of our experts today.

Can solar energy save you money?

Some 1.4 million UK homes now use solar energy to generate their electricity. This is helping many homeowners to save money on their electricity bills and even make money by selling excess solar energy back to the grid. Here, we explain how you can use panels, batteries, smart meters and smartphone apps to harness the power of renewables

How can a solar system improve smart home support?

A solar system can also be expanded in several interesting ways, allowing for greater Smart Home support. With the inclusion of elements like solar battery storage and smart hubs, you can create a system that best serves your technological needs and environmental goals.

Is it time to incorporate solar energy into a smart home?

It's time to start incorporating solar energy into the design of a modern Smart Home. Solar fits perfectly with the established goals of a Smart Home, providing a user with insight into their energy usage and control over their energy production.
