

Can a chemical anticorrosion strategy be used to fabricate stable inverted PSCs?

Motivated by the idea of metal anticorrosion, here, we propose a chemical anticorrosion strategy to fabricate stable inverted PSCs through introducing a typical organic corrosion inhibitor of benzotriazole (BTA) before Cu electrode deposition.

Can Ag electrode be used in inverted perovskite solar cells (PSCs)?

Use the link below to share a full-text version of this article with your friends and colleagues. Ag electrode is widely used in inverted perovskite solar cells (PSCs), but its easy reaction and corrosive nature with perovskite always induces severe stability issue.

How does AG anticorrosion work?

As a result, Ag anticorrosion ability is greatly enhanced by increasing the corrosion potential and decreasing the corrosion current, thus effectively inhibiting possible chemical reaction and corrosion between perovskite and Ag electrodes.

Why is corrosion control important in solar cell technology?

The delamination of protective layers, degradation of encapsulation materials, and the formation of cracks can facilitate the ingress of moisture, further accelerating corrosion and exacerbating performance deterioration. Corrosion control in solar cell technology is therefore of paramount importance.

How to protect c-Si solar cells from corrosion?

One approach to mitigate corrosion in c-Si solar cells is the application of protective coatings on metallic components, such as interconnects and contacts. These coatings act as a barrier, protecting the underlying materials from direct contact with moisture and corrosive substances.

Are long-lived inverted perovskite solar cells prone to corrosion?

One big challenge for long-lived inverted perovskite solar cells (PSCs) is that commonly used metal electrodes react with perovskite layer, inducing electrode corrosion and device degradation.

The power conversion efficiency (PCE) of the organic-inorganic halide perovskite solar cells (PSCs) has rocketed to a certified record of 25.8% [8, 9], indicating its ...

The concept of intelligence has many applications, such as cyber security and coating [2, 3]. Smart anticorrosive coating can recover or even enhance the anticorrosion ability of the coating with little manual intervention, and it brings about changes in material properties in response to an environmental stimulus [4, 5]. This is due to the fact that the smart anticorrosive ...

In the same method, TiO₂ and SiO₂ coatings on solar cells reduced the reflection of solar cells from 36% to

15% with a single-layer ARC (SiO_2) and 7% with a double-layer ARC ($\text{TiO}_2 + \text{SiO}_2$) (Ali et al., 2014). Reflection was reduced by 1.87% in double-layer ARC with low reflection index MgF_2 and high reflection index CeO_2 .

Self-healing anti-corrosion coatings are a new type of intelligent materials that can autonomously repair themselves to restore their anti-corrosion properties after ...

coupling agent, usually silane based, which provides . adhesion to the glass surface by a condensation reactions That snail trails occurrence means solar cells should have micro cracks. In ...

Currently, renewable energies account for a significant and growing share of energy generation worldwide. Photovoltaic (PV) and wind technologies together are expected to become the world's largest source of energy by 2025, with photovoltaic modules representing 60% of the capacity additions [] a scenario where most PV module manufacturers establish ...

Anti-corrosion strategy to improve the stability of perovskite solar cells. Liang Li, Zhenyu Guo, Rundong Fan and Huanping Zhou * Beijing Key Laboratory for Theory and ...

A chemical anticorrosion strategy is proposed to inhibit Ag electrode corrosion in inverted perovskite solar cells through introducing 2-mercaptobenzothiazole (MBT) inhibitor. MBT can bond on Ag surf...

DOI: 10.1126/sciadv.abd1580 Corpus ID: 229302037; Chemical anti-corrosion strategy for stable inverted perovskite solar cells @article{Li2020ChemicalAS, title={Chemical anti-corrosion strategy for stable inverted perovskite solar cells}, author={Xiaodong Li and Sheng Fu and Wenxiao Zhang and Sha Ke and Weijie Song and Junfeng Fang}, journal={Science Advances}, year={2020}, ...

Here, from typical theory of metal anticorrosion, a chemical anticorrosion approach for Ag electrode in inverted PSCs through introducing 2-mercaptobenzothiazole (MBT) as a corrosion inhibitor is reported. MBT can ...

1 Introduction. All inorganic perovskite CsPbI_3 has become a research hotspot in perovskite solar cells (PSCs) due to its intrinsic chemical stability and prominent ...

Formamidinium-based perovskites (FA perovskites) often incorporate methylammonium chloride (MACl) to stabilize the γ - FAPbI_3 phase and prevent formation of ...

Solution-processed organic-inorganic halide perovskite solar cells (PSCs) are continuously breaking efficiency records. They have reached a competitive efficiency of $\geq 26\%$, which indicates their potential for large-scale commercialization and implementation [1]. This advancement is due to their excellent optoelectronic properties, such as their strong light absorption [2, 3], long ...

Here, from typical theory of metal anticorrosion, a chemical anticorrosion approach for Ag electrode in inverted PSCs through introducing 2-mercaptobenzothiazole (MBT) as a corrosion ...

Corrosion of metallic materials is an inherently inevitable process driven by thermodynamic and kinetic factors, resulting in economic losses, resource wastage, and significant risks to personal safety [1], [2]. Unacceptably, metal corrosion presents a global hazard, and a survey estimates that corrosion-related losses in industrialized nations such as the ...

The synthesis and utilization of PANI have contributed to numerous technological advancements and the development of sustainable solutions [23] s diverse applications extend to solar cells [28], anticorrosion devices [29], chemical sensors [30], photovoltaic cells [31], and gas separation membranes [32]. Recent research on PANI has ...
