

How do I prepare my home for solar panels?

Before the installation of your solar panels can begin, you will need to prepare your home for the installation. This includes removing any debris from your roof, and ensuring that your roof is clean and free of any holes or damage. Go that little bit extra and clear the internal areas in preparation.

What is solar energy?

Solar energy is a renewable and sustainable form of power derived from the radiant energy of the sun. This energy is harnessed through various technologies, primarily through photovoltaic cells and solar thermal systems.

How does solar energy work?

The water is heated by heat energy from the Sun and returns to the tank. In some systems, a conventional boiler may be used to increase the temperature of the water. Solar energy is a renewable energy resource and there are no fuel costs. No harmful polluting gases are produced. Solar cells do not work at night.

How do solar panels heat water?

Cold water is pumped up to the solar panel. Then it heats up and is transferred to a storage tank. A pump pushes cold water from the storage tank through pipes in the solar panel. The water is heated by heat energy from the Sun and returns to the tank. In some systems, a conventional boiler may be used to increase the temperature of the water.

How do solar panels convert sunlight into electricity?

Solar panels convert sunlight into electricity through a process known as the photovoltaic effect where the energy from photons is absorbed by semiconductor materials, generating electron-hole pairs. The movement of these charge carriers creates an electric current that is then collected and utilized as electricity.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. - Solar cells convert the light from the sun into electricity.
