

How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

What do you need to know before installing a solar system?

If you are planning to install a solar system or buy a solar generator, you must master the basics of electricity and power generation. This means fully understanding what volts, amps, watts, and watt-hours are and how they relate to meeting your power generation needs.

How many components do you need for a basic solar setup?

For a basic solar setup, the above 3 components will suffice. But before you get too happy, there is something that you need to know. The power we get from the solar setup is direct current (DC). The power we get from wall plugs is alternative current (AC). Which means, you simply cannot plug your house appliances directly into a basic solar setup.

Can I install a solar power system on my own?

While it's technically possible to install a solar power system on your own, it's not recommended unless you have professional training. There are many factors to consider, from the electrical work to the physical installation of the panels. A professional installer can ensure everything is set up safely and efficiently.
