What is the difference between a PV meter and a pyranometer?

A PV meter, on the other hand, is used to measure how much electricity your solar system generated. Additionally, a solar irradiance meter or pyranometer can be used to measure the amount of solar radiation that is being received by your solar panels.

What type of meter do I need for solar power?

For The type of meter you need for solar power will depend on your specific needs. For grid-tied solar systems, a bi-directional utility meter is required to keep track of the electricity that is being transferred to the grid. A PV meter, on the other hand, is used to measure how much electricity your solar system generated.
