

Can a solar panel be shorted?

If the panels were robust and healthy, they are fine. Shorted panels produce I_{sc} (amps, short circuit) and if there are some thin or defective traces, they may be damaged long term, but shorting a good PV panel should not hurt it, even for an hour. If you're asking about short-circuiting any electronic device, you're probably worried that you've damaged your device in some way. A short circuit happens when an excessive current runs through an unintended path - you overload the system.

Can a solar panel be damaged by a short circuit?

In trying to measure the current output from a solar panel I've inadvertently short circuit the panel. Did I damaged the panel? How can I test if everything is ok? Does it still produce voltage when light is shone on it? I think there is high enough that it can't be damaged by short circuit. In fact, solar cells are rated by their .

What are solar panels called?
