

What is a portable solar charger?

A portable solar charger is used to power your device when you're away from power outlets. We took this into account when we chose to weight direct solar charging speed the heaviest in our testing metrics. It's also no surprise that some of our highest-scoring panels in this metric were chargers with the largest capacity.

Are portable solar chargers good for camping?

Portable solar chargers balance packability and charging capacity. Solar panels for camping are generally larger than portable models. They also have a higher capacity to convert sunlight into energy. The chart below shows the overall score for each model we tested.

How many Watts should a portable solar charger charge?

Once you get an idea of charging capacity and your intended use for a portable solar charger, it's time to figure out what devices you plan on using. For smaller handheld items such as smartphones, a portable solar charger with five to fifteen watts should suffice.

Which solar charger should I buy?

The Goal Zero Nomad 2 has everything you might need in a solar charger: high wattage, an abundance of USB ports and a business-like folding design and the leading monocrystalline panel type. For mains-style power output on demand, the EcoFlow portable power station and 220W panel is highly recommended.

What is the best solar charger for off-grid camping?

100 watts or more: These are the largest solar chargers that you can still pack away to move. They're the best energy-intensive devices and have fast charging speeds to keep your large battery banks or power stations full. A 110-watt panel is best for charging a large power station when off-grid camping.

How many amps can a solar charger charge?

It has two USB-A outputs that can each put out up to three amps, which is enough power to charge any USB device. Roughly the size of a notebook, this solar charger unfolds into three panels and has a zippered case that can easily hold two charging cables, a battery pack, and more.

Essential Equipment: Key components for solar charging include solar panels (choose based on wattage), charge controllers (PWM or MPPT), and battery inverters ...
